

The admitted forecast ratchets upward: a non-stationary, asymmetrically revised commitment

(a) The forecast is a moving target

(b) Vintage escalation for the two BRA-committed target years

Source: IMM Table 5 (above-embedded vintages, 2023–2025).
Of 12 consecutive-vintage revisions, 10 are upward (sign test $p=0.02$; runs test $p=0.43$, consistent with independence).
