

The closure taxonomy: from forecast to (not-yet-auditable) household incidence

Each link is coloured by identification status. Claims are bounded by the weakest link they cross; the chain goes dark before the household.

records go dark here (confidential / pending)

Minimum capacity-liability disclosure standard

- 1 Admitted firm forecast increment + screening parameters
- 2 Zonal allocation share
- 3 LSE-level settlement mapping for the charge
- 4 Approved recovery channel + class-allocation factor
- 5 Tariff-design mapping + customer denominator

Fields 1-2 are disclosable today (used here), fields 3-5 are where the chain goes dark.
